DETAILED ACTION

Reasons for Allowance

1. Claims 1 and 2 are canceled.
2. Claims 3-19 are allowed.
3. This is examiner's statement of reasons for allowance.

Regarding claims 3 and 4 the prior art, either singularly or in combination, does not teach or suggest "...data generator has at least a color conversion processing unit for performing color conversion processing with respect to said second recording data that have been obtained by said data obtaining section and that are stored in said memory, and a rearrangement unit for rearranging said second recording data that have been subjected to the color conversion processing by said color conversion processing unit into data corresponding to each of said dot forming sections as said plurality of processing units."

Regarding claim 5 the prior art, either singularly or in combination, does not teach or suggest "...data generator has a head control unit for controlling said recording head; said first recording data stored in said memory are transferred to said head control unit via said second transfer path without passing through said first transfer path; and said head control unit controls said recording head according to said first recording data that have been transferred via said second transfer path."

Regarding claim 6 the prior art, either singularly or in combination, does not teach or suggest "...data generator has at least a color conversion processing unit for performing color conversion processing with respect to said second recording data that have been stored in said

memory based on the data obtained by said scanner; said memory has an image data storage area for storing said second recording data that are based on the data obtained by said scanner, and a converted data storage area for storing the data that have been subjected to the color conversion processing by said color conversion unit; and when said second recording data are output to an external source, said second recording data are also stored in said converted data storage area.”

Regarding claims 7-9 the prior art, either singularly or in combination, does not teach or suggest “...said data generator has at least a color conversion processing unit for performing color conversion processing with respect to said second recording data that have been stored in said memory based on the data obtained by said scanner; said memory has an image data storage area for storing said second recording data that are based on the data obtained by said scanner, and a converted data storage area for storing the data that have been subjected to the color conversion processing by said color conversion unit; and a ratio between a size of said image data storage area and a size of said converted data storage area is set according to a read resolution with which said image is read.”

Regarding claims 10-16 the prior art, either singularly or in combination, does not teach or suggest “...said data obtaining section is a scanner for obtaining data by reading an image in an original; said controller is capable of generating layout data in which an image of said second recording data that are based on the data obtained by said scanner is laid out; when an image that has been laid out is to be recorded on said medium, said controller generates layout data in which said image is laid out, and said data generator converts the layout data that have been transferred from said controller via said first transfer path into said first recording data; and when an image that has not been laid out is to be recorded on said medium, said controller does not generate data

in which said image is laid out, and said data generator converts said second recording data that have not passed through said first transfer path into said first recording data.”

Regarding claims 17-19 the prior art, either singularly or in combination, does not teach or suggest “...said data generator has a color conversion processing unit for performing color conversion processing with respect to said second recording data that have been obtained by said data obtaining section and that are stored in said memory, wherein said color conversion processing unit is capable of converting the second recording data in the RGB system into recording data in the CMYK system; based on said second recording data in the RGB system, said controller generates layout data in the RGB system in which the image of said second recording data is laid out; said color conversion processing unit converts the layout data in the RGB system that have been generated by said controller into layout data in the CMYK system; said first recording data are generated from the layout data in the CMYK system that have been converted; and based on the generated first recording data, said recording head records on said medium the image that has been laid out.”

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
